DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

The drawings are objected to because figure 1 is an informal drawing containing hand written numbers, etc. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The abstract of the disclosure is objected to because the length should be limited to 150 words. Correction is required. See MPEP § 608.01(b).

Claim Objections

Claim 5-15 are objected to because of the following informalities: Claim 5 refers to a forth tetrahedron poing not included on the surface. However, each of the four points is disclosed a on a surface, as depicted in figure 8. Additionally, the claim contains a question mark following the ending period, the meaning of which is unclear. Appropriate correction is required.

Allowable Subject Matter

Claims 1-4 and 16-21 are allowed.

The following is an examiner's statement of reasons for allowance:

The independent claim 1 recites, "determining four calibration positions from the calibration table that span a tetrahedron enclosing the measuring position in a calibration space coordinate system; and for continuously measured, actual measuring values from the magnetic field sensor, performing a linear interpolating transformation of the measuring position to the real space coordinate system based on the four calibration positions". This feature in combination with the remaining claimed structure avoids the prior art of record.

The independent claim 18 recites, "determining four calibration points from a calibration table that span a tetrahedron in a calibration space coordinate system that encloses a measuring position measured by the magnetic field sensor; performing a linear interpolating transformation of the measuring position to a real magnetic field space based on the four calibration points". This feature in combination with the remaining claimed structure avoids the prior art of record.

U.S. Patent 6,636,757 to Jascob et al discloses calibration of a similar system, however the claimed calibration scheme is not disclosed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,484,118 to Govari.
